LIST OF FIGURES

Figure	Title	Page
2.1	Phases of inquiry-based laboratory investigation by Warner & Myers (2014) adapted from Llewellyn (2002).	29
2.2	Visualization of the process by which the initial 34 groups of inquiry activities were merged into bigger groups and finally into five general inquiry phases (Pedaste et al, 2015).	32
2.3	Outline of a generic science research process indicating where science tools are used by Dalgety, M.Z (2013)	53
3.1	Stages and procedures of research modified from Gall & Borg, 1983.	62
4.1	Validator's response to the laboratory manual	72
4.2	Student's response in small group to the laboratory manual	73
4.3	Student's response to the laboratory manual	74
4.4	Learning process flow in General Physics II class	76
4.5	Holistic result of the student's ability to perform experiments successfully without supervision.	80
4.6	Holistic result of the student's ability organizes and perform experiment safely and awareness of priority in laboratory	80
4.7	Holistic result of the student's ability to show engagement in conducting experiments.	81
4.8	Holistic result of the student's ability to demonstrate care and respect for the equipment set-up.	81
4.9	Level of skill performance for a group contrasted with individual student performance.	84
4.10	Student response to the laboratory manual	85
