CHAPTER V

CONCLUSION AND SUGGESTION

5.1. Conclusion

Based on the data analysis, researcher concludes that:

1. Student achievement of the class taught by using project based learning model with web-based learning media gives higher significant difference compared to the class taught by using direct teaching model.

2. Student motivation of the class taught by using project based learning model with web-based learning media gives higher significant difference compared to the class taught by using direct teaching model.

3. Student Interest of the class taught by using project based learning model with web-based learning media gives higher significant difference compared to the class taught by using direct teaching model.

4. The effectiveness of student achievement taught by using project based learning model with web-based learning media is 17.11% compared to student achievement taught by using direct teaching model.

6.1. Suggestion

Based on the data analysis, researcher suggests that:

1. The prospective teachers can use this research as a reference for doing the similar researches in order to increase student achievement and motivate the students either by applying appropriate learning model or using appropriate learning media.

2. The next researchers who will conduct a research related to web-based learning media in the form of web-blogs or websites should try using social media like Facebook, Twitter, Skype, etc to increase student achievement as those social media are very close to students daily life.
