

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

Based on the data analysis that presented in the previous chapter, the conclusion can be drawn as following:

1. There were three kinds of Jargon that was found in Namo Rambe Police Quarter, namely jargon related to *Sandi huruf* (letter code), *Sandi angka* (number code), and *Pangkat Kesatuan* (Corps position code).
2. There were 49 words that are considered as jargon in Namo Rambe Police Quarter. 13 (26,53%) has denotative meaning and 5 (10,20%) has connotative meaning. Furthermore, there are 31 (63,27%) that can not be analyzed semantically whether they have denotative or connotative meaning because the jargon is constructed by initial of the word. For example, *TSK* is taken from *Tegal, Solo, Kupang*.
3. The reasons of policemen using jargon in their communications or daily conversations are to keep communication short and concise, to be easier in delivering information, and to keep the secret in language so that people around them or out of the group do not know what they are talking about.

B. Suggestion

Based on the conclusion above, the researcher would like to propose some suggestions as following:

1. It is suggested to the readers who are concerned to this study, to continue and get more details about analysis of jargon used by Police in Indonesian Police Institution in other sides, for example morphological side.
2. It is suggested to other researchers who want to explore more about this study, to conduct the research about jargon and make the depth analysis in other objects.
3. The students who want to enhance the ability in speaking and writing should know the use of jargon language or vocabulary that found in each particular group of people.
