

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

The mean of control and experimental group in the post-test score were 66.75 and 80.15. It means that the mean score of experimental group was higher than those of control group.

The result of calculation t-test showed that the score of t-observed (4.69) > the score of t-table (2.024). It means that pictures series media significantly affects the students' achievement in writing narrative text. Thus, it can be concluded that the null hypothesis ( $H_0$ ) is rejected and the alternative hypothesis ( $H_a$ ) is accepted.

#### B. Suggestion

As the result of the study, it was suggested for:

1. English teachers to apply pictures series media in teaching learning process, especially in teaching writing because it can help student become easier in understanding the material.
2. Students to involve actively in this because it facilitates them to share ideas and information before they write. Than applying of pictures series media, the students to increase their ability in writing narrative text.

3. The other researchers who are interested in this research to give them information about pictures series, and to use picture series media in teaching writing narrative text.
