

ABSTRAK

MICHAEL ANDREAS HUTAPEA. NIM. 5103122027. “Hubungan Antara Hasil Praktek Kerja Industri dan Kreativitas dengan Minat Berwirausaha Siswa Kelas XI Teknik Mekanik Otomotif SMK Swasta Harapan Stabat.

Penelitian ini bertujuan untuk mengetahui besarnya hubungan antara hasil praktek kerja industri dan kreativitas dengan minat berwirausaha siswa kelas XI Teknik Mekanik Otomotif SMK Swasta Harapan Stabat. Metode Penelitian bersifat deskriptif korelasional.

Populasi dalam penelitian adalah seluruh siswa kelas XI Teknik Mekanik Otomotif di SMK Swasta Harapan Stabat yang terdiri dari 2 Kelas yaitu kelas XI TKR dan TSM yang berjumlah 45 orang. Dalam hal ini, sampel penelitian ditentukan dengan Monogram Harry King yang mana penentuan sampel diambil 75% dari jumlah populasi yang dilakukan secara acak menjadi 34 orang.

Data penelitian ini dikumpulkan dengan menggunakan tes untuk kreativitas dan minat berwirausaha menggunakan angket sedangkan untuk hasil praktek kerja industri menggunakan dokumentasi. Jumlah instrument kreativitas dan minat berwirausaha sebanyak 32 pernyataan, pada angket minat berwirausaha terdapat 30 pernyataan yang dinyatakan valid dengan reliabilitas 0,879 tergolong sangat tinggi. Sedangkan pada minat berwirausaha terdapat 30 pernyataan yang dinyatakan valid dengan reliabilitas 0,869 tergolong sangat tinggi.

Teknik analisis data yang digunakan adalah analisis korelasi product moment, analisis korelasi parsial dan analisis korelasi ganda pada taraf signifikansi 5%. Berdasarkan analisis data menunjukkan bahwa terdapat hubungan yang positif dan berarti antara hasil belajar praktek kerja industri dengan minat berwirausaha ($r = 0,618$) dan terdapat hubungan yang positif dan berarti antara kreativitas dengan minat berwirausaha ($r = 0,368$).

Hasil analisis menunjukkan bahwa koefisien determinasi antara Hasil Praktek Kerja Industri dan kreativitas dengan minat berwirausaha sebesar $R^2_{y.1.2} = 0,470$. Ringkasan hasil analisis regresi tersebut sebagai berikut : $F_h = 34,3$ harga $F_t = 5,34$ pada taraf signifikansi 5%, sehingga $F_h > F_t$ ($34,3 > 5,34$). Bahwa persamaan regresi $Y = 52,62 + 1,041 X_1 + 0,296 X_2$ dapat dipertanggung jawabkan untuk menarik kesimpulan mengenai hubungan antara hasil praktek kerja industri dan kreativitas dengan minat berwirausaha.

Kata kunci : *Hasil praktek kerja industri, Kreativitas, Minat Berwirausaha*

ABSTRACT

MICHAEL ANDREAS HUTAPEA. NIM. 5103122027. "The Relationship Between the Results of Industrial Work Practice and Creativity with Students Entrepreneurship Interest Class XI Automotive Mechanics Automotive SMK Private Stabat Hope.

This study aims to determine the magnitude of the relationship between the results of industrial work practices and creativity with interest in entrepreneurship class XI Automotive Mechanical Engineering Vocational Private Harapan Stabat. Research Methods are descriptive correlational.

The population in the study were all students of class XI Automotive Mechanics Engineering at Private SMK Harapan Stabat consisting of 2 Classes namely class XI TKR and TSM which amounted to 45 people. In this case, the sample of the study was determined by the Monogram of Harry King in which the sample was taken 75% of the randomly populated population of 34 people.

The data of this study were collected by using tests for creativity and entrepreneurial interest using questionnaire, while for the results of industrial work practices using documentation. Number of creativity instruments and entrepreneurial interest as much as 32 statements. In the questionnaire of interest in entrepreneurship there are 30 statements that are stated valid with the reliability of 0.879 is very high.

While the interest in entrepreneurship there are 30 statements that are valid with the reliability of 0.869 is rated very high. Data analysis technique used is product moment correlation analysis, partial correlation analysis and multiple correlation analysis at 5% significance level. Based on data analysis shows that there is a positive and meaningful relationship between the learning result of industrial work practice with entrepreneurship interest ($r = 0.618$) and there is a positive and meaningful relationship between creativity with entrepreneurship interest ($r = 0.368$).

The result of analysis shows that the coefficient of determination between Industrial Work Practice Result and creativity with entrepreneur interest is $R^2_{y.1.2} = 0,470$. Summary of regression analysis results are as follows: $F_h = 34.3$ price $F_t = 5.34$ at the level of significance 5%, so $F_h > F_t$ ($34.3 > 5.34$). That the regression equation $Y = 52.62 + 1.041 X_1 + 0.296X_2$ can be justified to draw conclusions about the relationship between the results of industrial work practices and creativity with entrepreneurial interests.

Keywords: *Results of industrial work practices, Creativity, Interest in Entrepreneurship*
