CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

Based on the result of research and data collection, can be concluded that:

Student's achievement in experiment class was greater than student's achievement in control class. So, Guided Discovery Learning Model has effect on student's achievement in Temperature topic at VII grade in SMP Negeri 1 Tebing Tinggi.

5.2 Suggestion

According to the data of student's achievement and the experience of author when applying the Guided Discovery Learning Model in class, so the author gives suggestion as below:

1. For the next researcher who wants to do research using Guided Discovery Learning Model, its better the teacher give motivate to the student to develop their confidence for present their discuss result, because some of student do not want to present it.

2. For the next researcher who wants to do research using Guided Discovery Learning Model expected to allocate the time for each step because Guided Discovery Learning Model require much time especially when student collecting data, processing data, and present their discuss result.

3. For the teacher can use the Guided Discovery Learning Model to increase student's achievement.
