

## CHAPTER V

### CONCLUSIONS AND SUGGESTIONS

#### A. Conclusions

After analyzing the data, it was concluded that there is a significant effect by using anagram with flashcards on students' vocabulary mastery, since  $t_{\text{observed}} > t_{\text{table}}$  ( $6.63 > 2.00$ ;  $df = 58$ ,  $\alpha = 0.05$ ). It means that the null hypothesis ( $H_0$ ) was rejected and the alternative hypothesis ( $H_a$ ) was accepted because there was significant effect of using anagram with flashcards on the students' vocabulary mastery.

#### B. Suggestion

Based on the conclusion above, the researcher gives some suggestion as following:

1. The English teacher was suggested to apply anagram with flashcards in teaching vocabulary and facilitated the students to learn independently.
2. The students guided by the teacher were suggested to apply anagram with flashcards in a group or individually to make them to be more active, enjoyable and have deeper understanding of a word.
3. Other researchers should try to apply Anagram with Flashcards in teaching vocabulary on different level of learners through different topics to prove the effectiveness of anagram with flashcards on students' vocabulary mastery.
