

CHAPTER V

CONCLUSION AND SUGGESTIONS

A. Conclusion

After analyzing the data, it can be concluded that using four square technique significantly affect on students' achievement in writing Narrative Text. Because it was found that the value of $t_{observe}$ was 2.870 with the degree of freedom (df) = 58 at the level of significance $\alpha (0,05) = 1.673$. It means that $t_{observe}$ is higher than t_{table} ($2.870 > 1.673$), null hypothesis is rejected and alternative hypothesis is accepted. So, four square technique is better to increase students' achievement in writing Narrative text.

B. Suggestions

The writer points out some suggestions for the following:

1. teacher to increase their own professionalism in teaching writing especially narrative text.
2. students to give information to increase their writing ability and to motivate the students to be better in writing narrative text.
3. the readers to have interest research to enlarge their understanding about writing narrative text.
