

## ABSTRACT

**Hasibuan, Winda Abdianti. 2014. Code Mixing in ANTV Black in News Program. A Thesis. Faculty of Language and Arts. State University of Medan.**

Code mixing is the mixing from a language into the structure of other languages in same utterance. The study deal with the code mixing in Black in News Program on ANTV officially by Djarum Black. The objectives of study are to identify the type of code mixing in Black in News program applied by the presenters. This research used descriptive qualitative design. The data consist of three editions of Black in News program on February 2014 which are analyzed in this study. The findings show that there are 97 insertions (34,52%), 96 alternations (34,16%), and 88 congruent lexicalizations (31,32%). The most dominant types of code mixing used is insertion because there are so many terminology from the second language that used and put in the middle of the presenters utterances in delivered information which their present and inability to find an appropriate word in one language, so that they combine their speech using bilingualism.
