CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

Based on the data results analysis, the researcher comes to a conclusion that the existing media used by the teacher in teaching recount text writing was less attractive to motivate and help students in studying recount text. Therefore, the students needed interesting, attractive and effective media that helped them to learn and write several types of recount text. The solution for the students' need was developing a new media for teaching recount text. The development of the media was conducted by using Digital Scrapbook which followed the R & D phases by Gall, Gall, & Borg (2003:569). The steps are (1) Gathering Data and information; (2) Need Analysis; (3) Designing Media; (4) Validating by expert; (5) Revising; (6) Final Product. Based on the media development, the average score of the media validation is 97.5 (excellent). It indicates that the media is already valid and appropriate to use as learning media for students particularly for teaching writing recount text.

A. Suggestions

Based on the above conclusions, the writer suggests that the teacher and the students should do the need analysis regularly to meet the most appropriate and interesting media for the students. Digital Scrapbook is one of the interesting media, but teachers should make the other interesting and develop this kind of Digital Scrapbook as the students' need. In this way, the students can achieve their best achievement in writing and composing the new text.
