

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

5.1 Conclusion

Based on analysis of the Jokowi's speeches in New Normal script in previous chapters, it can be concluded as following:

1. There were four types in modality models in Leech's theory, the frequencies are, 1 subclass of Intentional desire (2%) found, 7 subclass of Intentional hope (15%), 2 subclass of Intentional invitation (4%), 1 subclass of Epistemic possibilities (2%), 1 subclass of Epistemic predictability (2%), 4 subclass of Epistemic certainty (9%), 3 subclass of Epistemic necessity (6%), 17 subclass of Deontic orders (36%), and 11 subclass of Dynamic capabilities (23%)
2. The realization of modality found in Jokowi's speeches consisted of modality with subclass desire 1 data (2%), hope 7 data (15%), invitation 2 data (4%), possibilities 1 data (2%), predictability 1 data (2%), certainty 4 data (9%), necessity 3 data (6%), permit 0 data (0%), orders 17 data (36%), and capabilities 11 data (23%). While there was different study in realizing modality which some clauses realized double modality in one clause complex.
3. This research resulted that President Jokowi speeches applied modality in order to emphasize what he is intended to. The modality of Dynamic and Deontic orders are both found as the mostly appear in President Jokowi speech. It means that President Jokowi tends to communicate things related to human behavior.

Related to possibility means that the speech expecting something good will be happened in the future or in the next year. Deontic orders shown the responsibility of President as the speaker. There is intentional to make sure that what he was saying to be happened.

5.2 Suggestions

Based on analysis of modalities in Jokowi's Speeches, the following points are suggested:

1. The researcher who was expected to improve the knowledge in modality in speech and to conduct further studies in experiment with modality, which will be a very useful reference to the researchers needs related the modalities in speech studies.
2. The colleges are advised to explore the modality to expand their ideas in studies. In order to find out the phenomena and add sociolinguistics aspect especially in modality and to get new finding to make the research more complete.
3. Others researchers should conduct a research to make a scientific study in modality and modals expressing.
