

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

The media was developed by adjusting the media based on basic competences and the students' need. The need analysis was conducted on 19th August 2021 at SMK Negeri 1 Kisaran. The need analysis questionnaires were distributed to 35 students of XI JB 1. After that, the media was designed based on the 2013 curriculum syllabus and students' need. Then, the new writing media was developed. The developed writing media was designed for procedure text topic and developed based on five stages of scientific approach. Then, the developed writing media were validated by two experts which were the average percentage 95.2% and 97.1%. It could be concluded that the writing media were valid and appropriate to be used for grade eleven students of SMK Negeri 1 Kisaran. After the developed writing media were validated, the writing media could be accessed by the students on Twitter. The student signed in account or joined using link that have been shared by the teacher.

#### B. The Suggestion

Based on the research that had been done by the researcher, the researcher made many recommendations for further consideration. The first recommendation is for the teacher; while selecting and producing learning material, the teacher should keep the students' requirements in mind. The learning process will be successful if the teacher is skilled at conveying the procedure text and at using an

appropriate learning medium to supplement it. The teacher should also consider the kind of literature that will be assigned to the teachers. Since a result, creating a procedural text on tips and tricks is a simple task for the teacher, as this is the most often used text by culinary art department students throughout their learning process. As a result, they should be able to teach teachers this talent, particularly in their field. In this instance, kids may use Twitter since specialists have determined that it is a suitable medium for teaching procedural text writing skills. The second recommendation is for students to use Twitter as a medium for practicing their process text writing skills. Finally, for future research and development, testing should be performed while students are learning how to write procedure text, in order to ensure that the assessment is more accurate.
