

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### A. Conclusion

The student worksheets were created by aligning the content with the basic competencies and students' needs. On June 14th, 2023, a need analysis was conducted at SMP Kartika I-1 Medan, involving 19 eighth-grade students who completed a questionnaire. The gathered information was then analyzed to inform the development of a new worksheet. Subsequently, this worksheet underwent validation by two experts to identify any deficiencies or areas that needed revision. The average score provided by the experts was 4.5 and 4.8, equivalent to 94.3%. This score indicated that the worksheet was valid and suitable for use as a teaching resource for reading comprehension of recount text for eighth-grade students at SMP Kartika I-1 Medan.

Once the worksheet was developed, students could access it on Quizizz by entering the game pin provided by the teacher. This worksheet comprised twenty-five questions related to recount text, focusing on reading skills. The questions included both multiple-choice and short-answer formats. Questions 1-14 and 20-24 required students to select the correct response, while questions 15-19 and 25 required students to provide a typed answer. Before beginning to answer the questions, students received instructions and were presented with the texts that served as the topics for the questions. Each question had a time limit of approximately 90 seconds for completion. After responding to each question,

students received a score, which was determined by the accuracy and speed of their responses. Students earned streak points for answering questions correctly and quickly.

In summary, based on the mentioned findings, Quizizz can be considered as a recommended tool for creating student worksheets, especially for enhancing their understanding of recount text.

### **B. Suggestions**

Following the development of the student worksheet for eighth graders, several recommendations have been proposed for students, teachers, and future researchers.

For students, it is advisable that English teachers incorporate the newly developed worksheet into their teaching methods to enhance students' comprehension of recount text in reading.

For teachers, it is suggested that they remain attentive to students' needs when selecting teaching materials and utilizing various teaching media. Teachers can explore a range of resources to create engaging and innovative worksheets. While this study employed Quizizz to create worksheets, teachers can combine it with other strategies to help students improve their English proficiency, especially in reading skills.

For future researchers, it is recommended that they develop worksheets for junior high school students that focus on other language skills such as writing, listening, or speaking. Additionally, researchers should prioritize addressing

learners' needs related to English reading materials and aligning them with curriculum requirements to develop materials based on fundamental competencies. Furthermore, Quizizz can be further explored and tested in research experiments to assess its effectiveness in enhancing the quality of teaching and learning reading.
