

ABSTRAK

Wulan Surya Gumilang: *Analisis Hasil Praktek Pembuatan Boneka Rajut (Amigurumi) Pada Siswa Kelas XI SMK Swasta Citra Harapan*. Skripsi. Fakultas Teknik Universitas Negeri Medan, 2025.

Penelitian ini dilatarbelakangi oleh Mata Pelajaran Produk Kreatif Kewirausahaan (PKK) di SMK Swasta Citra Harapan yang bertujuan membentuk sumber daya manusia yang terampil, berkarakter, dan siap terjun ke dunia kerja. Diketahui bahwa meskipun pembelajaran telah menggunakan kurikulum merdeka, hasil praktik pembuatan amigurumi masih siswa kurang optimal. Penelitian ini bertujuan untuk mengetahui hasil praktek pembuatan boneka rajut pada siswa kelas XI SMK Swasta Citra Harapan.

Penelitian ini menggunakan penelitian deskriptif dengan pendekatan kuantitatif. Populasi penelitian adalah siswa kelas XI SMK Swasta Citra Harapan sebanyak 30 siswa. Pengambilan sampel menggunakan teknik total sampling. Data penilaian diperoleh melalui penilaian hasil karya siswa dalam pembuatan boneka rajut (*amigurumi*). Instrumen penelitian yang digunakan adalah lembar pengamatan hasil pembuatan boneka rajut (*amigurumi*), dalam lembar pengamatan terdapat indikator penting yang menjadi acuan penilaian yaitu bentuk amigurumi, pergantian benang, kepadatan dakron, merangkai bagian amigurumi, menyulam mata dan hidung, kerapihan kaitan. Setiap indikator dinilai dengan rentang skor 4,3,2,1. Instrument berupa lembar pengamatan yang telah di validasi oleh ahli untuk memastikan keabsahan isi instrument. Penilaian dilakukan oleh lima pengamat yang ahli dibidangnya sehingga hasilnya objektif.

Hasil penelitian menunjukkan bahwa hasil praktek siswa kelas XI SMK Swasta Citra Harapan dalam melakukan Pembuatan boneka rajut tergolong tinggi. Berdasarkan hasil penelitian menunjukkan sebanyak 19 orang (63%) mendapatkan hasil tertinggi, dan 11 orang (37%) mendapatkan hasil yang cukup. Pada indikator bentuk tas memiliki rata-rata paling tinggi yaitu 3,98 dan rata-rata terendah terdapat pada indikator pergantian benang pada aksan bulu kepala, badan dan rok yaitu 2,76. Maka secara umum dapat di simpulkan bahwa hasil pembuatan boneka rajut pada siswa kelas XI SMK Swasta Citra Harapan rata – rata tergolong tinggi sebanyak 63% dan dapat disimpulkan bahwa siswa sudah mampu membuat boneka rajut (*amigurumi*) dengan sangat baik, meskipun masih terdapat aspek tertentu yang memerlukan peningkatan.

Kata Kunci : Hasil Praktek, Boneka Rajut, Amigurumi, Rajutan.

ABSTRACT

Wulan Surya Gumilang: *Analysis of the Practical Results of Making Crochet Dolls (Amigurumi) Among Grade XI Students of SMK Swasta Citra Harapan*. Undergraduate Thesis. Faculty of Engineering, Universitas Negeri Medan. 2025.

The subject *Creative Product and Entrepreneurship (PKK)* at Citra Harapan Private Vocational High School aims to develop skilled, well-characterized human resources who are ready to enter the workforce. However, although the learning process has implemented the *Merdeka Curriculum*, the results of students' practice in making amigurumi are still not optimal. This study aims to determine the results of the knitting doll (*amigurumi*) making practice among eleventh-grade students of Citra Harapan Private Vocational High School.

This research employed a descriptive study with a quantitative approach. The population consisted of 30 eleventh-grade students of Citra Harapan Private Vocational High School. The sampling technique used was total sampling. Assessment data were obtained through the evaluation of students' work in making knitted dolls (*amigurumi*). The research instrument used was an observation sheet for the results of amigurumi production. The observation sheet included key indicators as assessment criteria, namely the shape of the amigurumi, yarn changing technique, dacron density, assembling amigurumi parts, embroidering eyes and nose, and the neatness of stitching. Each indicator was scored on a scale of 4, 3, 2, and 1. The instrument in the form of an observation sheet had been validated by experts to ensure its content validity. The assessment was conducted by two expert observers to ensure objective results.

The results showed that the ability level of eleventh-grade students at Citra Harapan Private Vocational High School in making knitted dolls is categorized as high. Based on the findings, 19 students (63%) achieved high results, while 11 students (37%) obtained sufficient results. The indicator for bag shape has the highest average, at 3,98 while the lowest average is found in the indicator for the change of tread in the head, body, and skirt feather accents, at 2,76. Therefore, it can be generally concluded that the average result of knitted doll production among eleventh-grade students is categorized as high, with 63% achieving high performance. Thus, it can be concluded that students are capable of making knitted dolls (*amigurumi*) very well, although certain aspects still require improvement.

Keywords: Practice Results, Knitted Dolls, Amigurumi, Crochet
