

CHAPTER V CONCLUSION AND SUGGESTIONS

A. Conclusion

Based on the research finding, it can be concluded that teaching reading skill by applying PQRST method significantly affects on the students' reading comprehension. It can be seen from the data which had obtained in the post-test of experimental group were: the total score was 2300 and the mean score was 76.66, while the data in control group were: the total score was 2010 and the mean score was 67. Thus, the students' score in experimental group was higher than the students' score in control group. The calculation of the data in the testing hypothesis showed that t -observed (5.333) was higher than t -table (2.000), it means that the alternative hypothesis (H_a) is accepted.

B. Suggestions

Based on the conclusion above, the result of this research contributed some valuable suggestion for those who interest in teaching reading skill as follows:

1. The English teachers to improve their method in teaching reading comprehension by applying PQRST method, so that the students can comprehend on what they had read.
2. Students are advised to have more practices and applying PQRST method in reading comprehension.
3. For better result in the future, the others researcher have to involve more students and classroom meeting, especially in reading skill.
