

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

Based on the result of the data analysis and discussion, the researcher concludes that mean of control and experimental group in the post-test score are 66.82 and 78.77. It means that the mean score of experimental group is higher than those of control group. The result of calculation of t-test shows that the value of t-observe 3.62 is higher than value of the t-table ($3.62 > 2.018$; $df=42$, $\alpha=0.05$).

B. Suggestion

As the result of the study, is suggested that :

1. The English teachers apply group investigation method in improving students' ability in writing a narrative paragraph by giving much exercise to the students.
2. The students practicing group investigation method will give you invaluable benefit because it helps you to concentrate your attention to the writing which will guide you to write text much better.
3. The researcher should use group investigation method in English writing to enable learners write a good narrative paragraph.
