CHAPTER V
CONCLUSION AND SUGGESTION

A. Conclusion

The result of calculation t-test formula shows that the score of t-observed (3.003) > the score of t-table (2.024). It means that clustering technique significantly affects the students' achievement in writing descriptive text. Through clustering technique, the students are being able to express their ideas easily and put them into such a good descriptive text. Thus, it can be concluded that the null hypothesis (Ho) is rejected and the alternative hypothesis (Ha) is accepted.

B. Suggestion

In relation to the conclusion, suggestions are stated as the following:

1. Since this research is limited to investigation of the Clustering Technique on writing and how the Clustering Technique can be developed is not known, it is suggested that a research should be done on writing development.

2. The English teachers are suggested to apply clustering technique to improve the students' ability in writing descriptive text, the students are suggested to use clustering technique in order to increase their ability in writing descriptive text and other researchers are suggested to apply clustering technique in conducting the further research with other skill or genre.
