CHAPTER V

CONCLUSION AND SUGGESTION

5.1. Conclusion

Based on the discussion on this study, researcher conclude some things, that are:

- 1. The application of problem-based learning model can make a student-centered learning that is indicated by an increase in activity of students from the first cycle to the second cycle of 23.06%.
- The application of problem-based learning models can improve student learning outcomes in sub-material human reproductive system are indicated by an increase learning outcomes of the first cycle to second cycle of 19.8%.

5.2. Suggestion

Based on the analysis and the result of the study above, researcher offer some suggestion, that are:

- For teachers, in order to improve the quality of learning process and find solutions for solved the learning difficulties problem by implementing the problem-based learning model also to help making a good plan so the class can reach the mastery level.
- 2. For researchers who want to apply problem-based learning models should be more attention to the problems that will be used because the matter is the foundation that will lead to learning.
- 3. For prospective teachers, should better to understand how to manage the class well, especially when the students do group discussion so that students play an active role.
