

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

After do the experiment, the data analysis and hypotesis testing, researcher get the conclusion, as follow:

1. The increasing of students' learning outcome through Collaborative learning model based on Lesson Study with using Worksheet media is higher with the percentage is 75% than using Index Card Match media is 69%.
2. The increasing of lesson study's percentage from one meeting to second meeting in experimental class 1 is 67.96% to 88.28% and for experimental class 2 is 67.7% to 86.93%.

5.2 Suggestion

Based on result and discussion, there are some suggestion that must be raised:

1. It is suggested for chemistry teacher to use Collaborative learning model based on Lesson study with Worksheet media in purpose to increase students' learning outcome.
2. It is ssuggested for another researcher that want to implement the same model with different learning topic.
3. It is suggested for chemistry teacher to use the fit model and media in purpose to increase students' learning outcome.
