

CHAPTER V

CONCLUSION AND SUGGESTIONS

A. Conclusion

Based on the result of the data analysis and discussion, the researcher concludes that Applying Group Investigation Method significantly affects the students' achievement in reading comprehension, since students' achievement in reading report text who taught by applying Group Investigation method is higher than taught by Applying Lecturing Method. Therefore, the formulated hypothesis as "The students' achievement taught by Applying Group Investigation method in reading report text is higher than those taught by Lecturing Method" is accepted. This supported by the data analysis results in which the t-observed (3.27) is higher than the t-table (2.00) at the significant level of (0.05).

B. Suggestions

Based on the conclusion above, the researcher gives some suggestions for those who are interested in teaching reading as follows:

1. English teachers are suggested to apply Group Investigation Method in their teaching learning process in order to improve their students' achievement in reading report text.
2. Students follow the steps on Group Investigation Method to improve their achievement in reading comprehension particularly in reading report text.
3. Other researchers who may apply Group Investigation Method for further research.
