

CHAPTER V

CONCLUSION AND SUGGESTION

5.1. Conclusion

Based on the result of research that have been outlined in chapter IV, the conclusion of this research are described below :

1. Generally, Biology's learning in Class X and XI MAN 1 Medan have been used scientific approach such as observing, questioning, experimenting, associating, communicating.
2. The activity of scientific approach that dominantly done by the students is observing, meanwhile associating is the activity that rarely done.

5.2. Suggestion

Based on conclusion above, it can be proposed some suggestion like:

1. It is need to investigate the scientific approach in the each step focusly, so the conformity of implementation with nature syntax is achieved in the next research
2. The indepth interview and analysis is required in the next research so the syntax implementation's problem can be detected
3. Data collection in the field should be done in the early semester, when the learning process in the class is done focusly.
