

CHAPTER V

CONCLUSIONS AND SUGESTIONS

5.1. Conclusion

Besed on the research results get the chemistry module with integrated Islamic value on Chemistry of element topic success arranged. Development of process is include stage : analysis textbook, development of chemistry module, standarization and revision. The Islamic value was inserted is Writing basmalah sentence, Integrating verses of the Al-Qur'an that are relevant, Explanation of the meaning of a quote verses of the Al-Quran, Provision of reflection description, Showing the figures of Muslim scientists, Insertion aphorismsand from the data analysis and discuccion get :

1. The Islamic values extant in textbook is not contain
2. Design of chemistry module with integrated Islamic values on chemistry of element topic identified is valid and not need revision and feasibility of BSNP criteria
3. Responds teacher and student to the design chemistry module with integrated of Islamic values on Chemistry of Element topic get positive respond

5.2. Suggestion

Based on the result of research and conclusion had been explain above, so for the next step from researcher suggestions some case below :

1. For the teacher and prospective teacher, before using textbook or module chemistry better check the textbook feasibility or not to goals of education and BSNP standard. Beside of it, teacher also must pay attention component on textbook or module to increase cognitive and affective strudent.
2. Design of chemistry module integrated with Islamic values need to recommendation to use in learning process because increase their noble character and devoted to Almighty Got.
3. To the next researcher who wish to undergo further research is recommended to further develop Islamic Value on other chemical materials. Expected integration of Islamic values on the module used as a single entity in chemical content.
