

CHAPTER V

CONCLUSION AND SUGGESTION

5.1. Conclusion

Based on the result of research that obtained from the result of data analysis, it can be stated some conclusion:

1. The module was get positive respons from material and media experts as validator. The average of the assessment results by material experts and media experts meets the criteria that is very feasible.
2. The module was get positive respons from biology teachers, the module feasible for teaching and learning process.
3. After trial phase was done, student responses obtained showed the modules developed is very feasible for use in the learning process.

5.2 Suggestion

Based on the conclusion above, there are some suggestion that have to be stated in order to make teaching and learning process in biology become effective and efficient as follows:

1. It is suggested that the biology teacher for developing the standart biology learning material based on the K13 curriculum as main learning media for students especially learning material environmental changes topic according to Indonesia Educational National Standart (Badan Standar Nasional Pendidikan/BSNP).
2. It is suggested to next researcher could improve the better learning material especially module based on K13 curriculum and develop the learning material good in content, good design, good language, and complete,so the students are easy and simple to understand.
