

## CHAPTER V

### CONCLUSION AND SUGGESTIONS

#### **5.1 Conclusion**

After having discussed the results of the study, it can be concluded that there are three categories of semantic change of English loanwords occurred in Indonesia irrigation text. They are narrowing meaning, broadening meaning, and no semantic change. It means that most of the loanwords which are used in Indonesia irrigation text get no semantic meaning. It proves that the meaning of word from original language does not change in the target language. This meaning of word does not change eventhough it is loaned from foreign language. It is caused by there is no meaning which can be accepted as the original source of word. Or it can be said that there is no correctly or appropriately word which can produce an equivalent idea of the loanword in target language.

#### **5.2 Suggestions**

Based on the results of the study, there are some suggestions because technical terms are needed to denote new applications of science to everyday life, so in teaching learning English, especially in Technical Middle Schools as well as in Engineering Faculties, teachers of English are suggested to do the following:

- 1). It is suggested that English teachers of technical school as well as in the engineering faculties should give special attention to teach English loanwords in the early time in order to make their students easy to understand the information.
- 2). Through applying loanwords, in English teaching processes especially in irrigation texts, the students of engineering faculty can prepare them

self as an orientation to be ready to work in the irrigation field as soon as they graduated from their faculty.

- 3). By paying attention of the English teacher in teaching loanwords in English especially the technical terms it means students of engineering faculty may increasing their competitiveness in order to prepare themselves to be ready to answer the challenges of the coming of the globalization era which has been declared and therefore like or unlike this new term has allowed the foreign engineers as well as contractors from any countries of the world entering the Indonesian construction industry segment market and vise-versa.
