ABSTRAK

Tujuan dari penelitian ini untuk mengidentifikasi dan membandingkan jenis senyawa antiinflamasi pada daun muda, daun tua, buah dan tangkai daun tanaman buasbuas (*Premna pubescens* Blume) dengan metode *Gas Cromatografy Mass Spectrometry* (GC-MS). Masing-masing sampel diekstrak menggunakan metode maserasi dengan perendaman etanol 96% di *dryer* untuk mendapatkan ekstrak etanol berbentuk pasta. Pasta di analisis menggunakan (GC-MS). Data hasil GC-MS dianalisis menggunakan *software Pubchem* (<https://pubchem.ncbi.nlm.nih.gov>). Hasil penelitian menunjukkan senyawa antiinflamasi terbanyak pada daun tua dengan 11 jenis senyawa bioaktif diantaranya senyawa 2 -oxopentanedioic acid, (methyltrisulfanyl)methane, (5S) -5 benzyl -1- [4- [(2R) -5,6- dioxo -1- (2-phenylethyl) piperazin- 2- yl] butyl] -4- (2-phenylethyl) piperazine -2,3 -dione, 9 -methoxy -3, 6- dimethyl -2, 4, 5, 6- tetrahydro -1 H -azepino [4,5-b] indol- 6 -ium; chloride, (1S) -2- ethyl- 1- (4-methylphenyl) -1H -chromeno [2,3-c] pyrrole -3,9 -dione, ethyl 2- (2-oxocyclohexyl) acetate. Pada daun muda hanya ada 1 jenis senyawa bioaktif yaitu senyawa 1- cyano -2- methylguanidine. Pada buah sebanyak 4 jenis senyawa bioaktif diantaranya senyawa 3- (3,4 Dichlorophenyl) -1-[6- [2- (Dimethylamino) Ethoxy] -4,7 -Dimethoxy -1-Benzofuran -5- Yl] Propan -1 -Ol, N ,N -Dimethyl -4- [2- (3-Methylphenyl) Ethenyl] Aniline. Pada tangkai daun sebanyak 4 jenis senyawa bioaktif diantaranya senyawa (5S) -5- benzyl -1- [4- [(2R) -5, 6-dioxo -1- (2-phenylethyl) piperazin -2-yl] butyl] -4- (2-phenylethyl) piperazine -2,3 -dione, N- [chloro (dimethylamino) phosphoryl] -N- methylmethanamine, 2- triethoxysilylbutanenitrile. Senyawa antiinflamasi tertinggi terdapat di daun tua dan terendah di daun muda.

ABSTRACT

The purpose of this research was to identify and compare type of anti-inflammatory compounds in young leaves, old leaves, fruit and leaf stalks of the plant buasbuas (*Premna pubescens* Blume) with Gas Cromatografy Mass Spectrometry method (GC-MS). Each sample was extracted using a soaking method of maceration with ethanol 96% in the dryer to get the ethanol extract of shaped pasta. Pasta in analysis using (GC-MS). GC-MS results data is analyzed with software Pubchem (<https://pubchem.ncbi.nlm.nih.gov>). The results showed the most antiinflamasi compound on old leaves with 11 types of bioactive compounds such as compounds 2- oxopentanedioic acid,(methyltrisulfanyl) methane, (5S) -5- benzyl -1- [4- [(2R) -5,6 -dioxo -1- (2- phenylethyl) piperazin -2- yl] butyl] -4- (2-phenylethyl) piperazine -2, 3- dione, 9- methoxy -3, 6- dimethyl -2, 4, 5, 6- tetrahydro -1 H- azepino [4, 5-b] indol -6-ium; chloride, (1S) -2- ethyl -1- (4- methylphenyl) -1H- chromeno [2,3-c] pyrrole -3,9- dione, ethyl 2- (2-oxocyclohexyl) acetate. In young leaves there is only 1 type of bioactive compound that is compound 1- cyano -2- methylguanidine. In fruits as many as 4 types of compounds bioactives including compounds 3- (3,4- Dichlorophenyl) -1- [6- [2- (Dimethylamino) Ethoxy] -4,7- Dimethoxy -1- Benzofuran -5- Yl] Propan -1- Ol, N, N- Dimethyl -4- [2- (3- Methylphenyl) Ethenyl] Aniline. On the stalk leaves as many as 4 types of bioactive compounds such as compounds (5S) -5- benzyl -1- [4-[(2R) -5,6 -dioxo -1- (2- phenylethyl) piperazin -2- yl] butyl] -4- (2-phenylethyl) piperazine -2, 3- dione, N- [chloro (dimethylamino) phosphoryl]- N- methylmethanamine, 2- triethoxysilylbutanenitrile. Highest anti-inflammatory compounds contained in old leaves and lowest in young leaves.
