Dear Editor:

The manuscript entitled "Characterization of Membrane PVA-Enzyme Coated PVC-KTpCIPB as Urea Sensor with Potentiometric Method" by Hakim S et al. is submitted to Rasayan Journal of Chemistry for consideration for publication as an original article.

Membranes with PVA, enzymes, and PVC-KTpCIPB contribute as pores on the indicator electrode of potentiometric cells to produce voltage. The study aimed to characterize membranes modified with PVA, enzymes, and PVC-KTpCIPB as urea sensors.

The results showed the sensitivity obtained was 19.069 mV/decade with a confidence level of $R^2 = 0.9434$ in the range of $1.10 \cdot 10^{-5}$ – $5.10 \cdot 10^{-4}$ M and detection limit of $1.10 \cdot 10^{-5}$ M. These results provided the study about membrane electrode from polymer as urea sensor. Then, it should be of interest to researchers in the fields of materials chemistry. Therefore, we hope that the manuscript fits the scope of Rasayan Journal of Chemistry. The article is original, unpublished, and not being considered for publication elsewhere.

Sincerely,
Abdul Hakim S
