

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

After analyzing the Taxonomic Relation in English translation of Surah Al-Baqarah for section 3 and section 4, the conclusions are drawn as follow:

- 1) The types of taxonomic relation can be found in English Translation of Surah Al-Baqarah in section 3 and section 4. They are repetition, synonym, contrast, class and part. In section 3 and 4, repetition is the most dominant type and followed by the other four types with no significant differences in percentage. It was found that the repetitions in section 3 and section 4 dominantly were the rules that purposed to command, warn, and prohibit the Israel and belief people related to the grace, rewards, and punishment that would be gotten by them from Allah.
- 2) The process of taxonomic relation were realized in logogenetic pattern in section 3 and section 4 of surah Al-Baqarah. From the ten most frequent lexicals of repetition, it had found that in the section 3 and section 4, Medium is the most dominant. It happen because there are some clause that contain about certain lexical that functioned to track the discussion in the previous clause as the warning. Command and prohibition. Therefore it was concluded that repetition that realized in the Quran of Surah Al-Baqarah for section 3 and section 4 make the text is in the level moderate until easy to be understood by the reader because the frequency of repetition in the densely patterns.

- 3) The reasons why the taxonomic relation used in the way they are [+institutionalized/social/+specialized]. It happens because Section 3 and section 4 of surah Al-Baqarah are constrain by topic of religion which is marked by many lexical that repeated that related to religion and it was determined by the marked of [+institutionalized]. Section 3 ad section 4 were directed to the social as it pointed to the children of Israel and believe people therefore the participant characteristics is marked as [social]. Additionally, the semantic domain was regulated by the certain field of religion, therefore it was marked as [+specialized].

5.2 Suggestion

In related to the conclusions, suggestion are staged as the following.

1. It is suggested for further research to conduct other research with the longer length of the text especially in the Quran to prove whether there will be all the types and the branches type of Taxonomic Relation that can be found.
2. It is suggested for those who are interested to conduct discourse analysis by applying the taxonomic relation especially in the complex text to unfold it.
3. It is advised for the researchers to find out the realization of process and reasons of taxonomic relation in the other discourse which is more complex in order to give new findings and contribution to field of discourse analysis.
