CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusions

This study focused on turn-taking strategy on talk shows. It was aimed to gain the types, ways, and reasons of turn-taking strategy on the talk show. Based on the analysis, the conclusions were:

1) There were three types of turn-taking strategies in this study, they were taking the turns consisted of starting up, taking over, interrupting and overlapping. Then, the researcher also found holding the turn on his study. It has consisted of filled pauses, silent pauses, lexical repetition and a new start. The last, the researcher found yielding the turns. It was consisted of prompting, appealing and giving up. From the whole of turn-taking strategy, the researcher concluded that interrupting strategies was the dominantly used in turn-taking by male and female in the political talk show.

2) There were two ways of turn-taking strategies found in this study. They were shift of gaze away from current speaker and using gesticulation. Shift of gaze away dominantly used by male and female host and using gesticulation dominantly used by male and female guest.

3) There were only two reasons of turn-taking strategies in this study, they were asking for clarification and showing rejection. Asking for

clarification was dominantly used by male and female host and showing rejection dominantly used by male and female guest in political talk show. Other reasons of turn taking strategy were not found by researcher in this study.

5.2 Suggestions

There were some suggestions that given by researcher related to finding and conclusion from this study, as follows:

1) Conversation analysis in turn taking was very important for next researchers who concern with communication in social life. Because in social community, the language users must have their own rules, regarded to culture, language, mental to reach an ideal and understanding communication.

2) This research may give a few suggestions for next researchers that will analyze conversation among more than ten participants. They also can analyze conversation between participants who use different languages. For example, three participants talk about something in conversation and each conversation use different languages. It may interest to analyze that conversation.
