5.2. Advice

Literacy activities at SMA Negeri 4 Medan are still limited to reading books in teaching and learning activities, there is no specifically held school literacy activities. In searching for information, students rarely go to the library because they assume that searching for information using search engines is easier and more practical, even though they realize that the information they have found cannot be ascertained its accuracy.

Thus, the author advices to school can hold a guidance program that explains how a good information searching strategy by introducing a searching through Boolean logic by utilizing computers available at school, so students can find out what information literacy is and can improve students' information literacy abilities.

In addition, schools are expected to be able to provide facilities that support the implementation of The Big6 model by providing Wifi and computer access that student can use to find information from the internet. Schools can also optimize the library as a student facilities for have good information literacy skills.
