

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### 5.1 Conclusion

With reference to the data analysis, findings, and conclusions, the following are drawn:

(1) Material, mental, relational, behavioral, verbal, and existential processes were uncovered in CNN Online News. The three types of processes that dominated the news were material processes, relational processes, and verbal processes. The most dominant process was Material Process 216 (50,35 percent ), CNN Online News uncovered the following participants: actor, goal, sayer, carrier, attribute, verbiage, senser, phenomenon, target, existing, existence, behavior, token, value, receiver, behavior, and range. Actor and Goal were dominantly uncovered in the clauses of CNN Online News, there were 167 (26,38%) of Actor and 141 (22,27%) of Goal. Actor was the most dominant, and CNN Online News uncovered the following circumstances: Location, Cause, Manner, Accompaniment, Extent, Matter, Angle, and Role. The most dominant was Location 193 (60, 50 percent).

(2) There were congruent and incongruent realization of transitivity system. The most dominant was congruent realization. The transitivity system realization of congruent and incongruent realization covered almost all types of processes and Only incongruent realization of existential process was realized. The congruent realization happened due to of the use of human or animate being that could do something physically. The incongruent realization happened due to of the use of inanimate participant

by which actor didn't have capacity of human like that could do something physically, experience something, describe and say something.

- (3) The transitivity system elements were realized in the ways they were based on the context of the situation in this study's field. The field represents three entries: arena/social activity [+institutionalized/-institutionalized], participant characteristics [person/social], and semantic domain [+specialized/-specialized]. Arena/social activity, particularly [-institutionalized], was the most dominant entry in the text. It refers to a social activity that is free from the influence of official institution. It means that an arena/social activity in the text of CNN Online News is not constrained by institutional rules or requirements.

## 5.2 Suggestion

In line with the conclusions, the suggestions are staged as follows:

- (1) Other researchers are advised to recognize that the six categories of transitivity have distinct meanings when portraying a clause in English. They recommended learning more about the many forms of transitivity processes in order to be able to assess text or speech produced in English using the transitivity system.
- (2a) It is suggested both of English teachers and lecturers to teach new grammar system like systemic functional linguistics beside the traditional grammar, so it can be avoid confusion for the English learners in the future.
- (2b) It is also suggested that futher studies should be done by using more sources of the data and different research design.
