

BAB V

CONCLUSION

5.1. Conclusion

The research and discussion can be concluded as follows:

1. Student learning outcomes from the cognitive aspect in learning the main fungi in class X IPA SMA Negeri 2 Lubuk Pakam in the academic year 2020/2021 experienced learning difficulties at C1 level of 35.19% medium category, C3 of 35.42% medium category, C2 of 36, 11% is high category, C4 is 46.30% very high category, Creation (C6) is 47.22% very high category and Evaluation (C5) is 47.92% very high. The highest difficulty felt by students was on cognitive aspects at level C5 with a very high category with a student's absorption of 47.92%.
2. The factors affecting the learning difficulties of class X IPA students of SMA Negeri 2 Lubuk Pakam in the 2020/2021 academic year were teachers with a percentage (47.27%) that had no effect on student learning difficulties, the school environment with a percentage (52.78%) was quite influential on the difficulties. student learning for other factors such as psychology (56.64%) is quite influential on student learning difficulties, physical (56.94%) is quite influential on student learning difficulties, the community environment (60.42%) affects student learning difficulties, parents (62.50%) affect student learning difficulties and learning problems (93.06%), including very influential on student learning difficulties.

5.2. Suggestion

1. It can be very useful when the material of fungi is taught using more innovative way since the material is the real problem for students to study it.
2. The research is limited as it was held during the pandemic. More realistic result may come up differently when it is held in normal situation.
