

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

Based on result and discussion of doing research can be conclude as follows :

1. Student worksheet developed with stage define, design, develop and disseminate
2. Feasibility of student worksheet according to material expert included to category of "very feasible"
3. Feasibility of student worksheet according to learning strategy expert included to category of "very feasible"
4. Feasibility of student worksheet according to design graphic expert included to category of "feasible"
5. Feasibility of student worksheet according to biology teacher respon included to category of "very feasible"
6. Feasibility of student worksheet according to students respons included to category of "very feasible"
7. Effectiveness of students worksheet by using guided discovery learning on vertebrate topic effective to increase learning outcome of students with criteria "medium"

5.2. Suggestion

Based on conclusion above, so researcher suggest several suggestion to overcome the problem that found in reality :

1. To get maximal result so research needed to continue till the stage of larger disseminate
2. Development of student worksheet by using guided discovery on vertebrate topic can be more large and developed by teacher to be a learning instrument to achieve learning purposes which fit with the needed of students to create effective learning

Support is needed from school side to give a training towards teachers to be able to develop student worksheets as addition in learning.
