

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### 1.1. Conclusion

There are differences in student cognitive learning outcomes in the experimental group and the control group. The average value of learning outcomes in the experimental group was 85.00, while the average value of learning outcomes in the control group was 78.00. This difference can be seen by the Sig. (2-tailed) on the independent t-test of 0.013. There is an effect of the use of *Rumah Belajar* on student learning outcomes on Vertebrate material in Class X MIA SMA Negeri 4 Medan.

#### 1.2. Suggestion

Schools and students would be able to use the e-learning to improve their learning outcomes. The learning process is believed to be more active and independent, both at home and any where else.
