

CHAPTER V

CONCLUSION AND SUGGESTIONS

This chapter presents the conclusions and some suggestions from previous discussion regarding this research.

A. Conclusion

Based on the result that has been done about integrating artificial intelligence in increasing students' interest in learning speaking skill for eight grade students at SMP Bina Bersaudara, the researcher concludes that integrating artificial intelligence in classroom can help students feel more interested in learning speaking skill. Students have equal time to practice their speaking. Integrating artificial intelligence helps to optimize students' skill and create an environment conducive to learning. Artificial Intelligence provides fun and allows to learn by fascinating students and assist them to improve speaking skills in a useful way. In addition, integrating Artificial Intelligence in learning will be very beneficial for students to the development of the 21st century skills. It is now necessary to focus on preparing students for the 21st century skills. It is incumbent on all of teacher and students to grapple with the literacies and skill sets that will increase students' chances of success and even survival as students prepare to adapt to an advance world not far ahead. By integrating Artificial Intelligence, it will assist them to face the future career.

B. Suggestions

1. For students

Students are suggested to practice speaking English more and have curiosity to learn the PictoBlox program, since it can help them to improve speaking and coding skills which is required in 21st century era.

2. For teacher

Teachers are suggested to take the benefit of modern technology to be applied in class.
