

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

The conclusion of this research is based on research findings; the materials have been developed based on literacy and numeracy, following the needs of tenth-grade students in SMKN 1 Beringin. The data were taken for this research through observation with the syllabus and books usually used by the teacher in class as the instrument. Then questionnaires and interviews to find out the needs and problems of the students in writing recount text in English. The subject of this research was 32-grade tenth students of SMKN 1 Beringin. The research was conducted by using Research and Development (R&D) theory by Gall and Borg (2003), which has six stages. An expert validated by giving questionnaires as an assessment instrument. The final score of four aspects of the material evaluation was 3.70 from Expert 1 and 4.00 from Expert 2, which was $3.50 < \chi \leq 4.00$. The score indicates that the developed material was considered “Very Good” by predicate.

B. Suggestions

The final product of this research is writing descriptive text materials for tenth-grade students of SMKN 1 Beringin; several recommendations have been made for some parties based on the research findings.

1. The English Teachers

The English teachers of the tenth grade of vocational high school could use the developed materials in the teaching and learning process. These products were developed to help students enhance their writing skills in recounting text. To assist students in achieving learning targets, especially for tenth-grade students, teachers should be able to create materials that suit the needs of the students.

2. The Others Researchers

For the following researchers, conducting a needs analysis of students is the most crucial step in producing materials, so the research's product should fulfill the requirements and interests of students. If developed materials are simple, they may be valuable for teachers and students in teaching-learning. The design of the materials is the next thing developers should consider. The materials should be visually appealing and engaging for the students.
