

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

From the research that researcher has done in SMK Sinar Husni Medan with an English teacher about the understanding and implementation of Independent Curriculum in terms of teaching method it is found that the teacher used the method of Project Based Learning in his classroom. Project Based Learning could be implemented in 6 steps, starting from (1) giving the essential question, (2) designing a plan for the project, (3) creating a schedule, (4) monitoring the students and the progress of the project, (5) assessing the outcome, and (6) culminating in the evaluating the experience. (Maulany, 2013).

After analyzing the data it is found that the teacher have implemented the whole steps of Project Based Learning while teaching English in classroom eventhought in some steps researcher found the teacher was forgetting some aspect to be implemented. Teachers need to be more careful in implementing the learning model they choosed because learning model has a huge influence for the students. Moreover Independent Curriculum ask the teacher to be a creative teacher in leading their students to be a creative learners.

B. Suggestion

From the research result that have conducted by the researcher, the writer would like suggest some points to English teacher, institution and also the other researcher, and they are :

1. Teacher and Institution

For the teacher, it is hoped that this research can encourage them to consider a better way in teaching especially in conducting a proper teaching method while teaching English. The teacher also can apply and have to prepare more than one models of learning. English teacher in this school also need to innovate their own models in order to be able in controlling and managing the class better than before, because in Independent Curriculum teachers were given a freedom to create anything that teachers need in teaching as long as it will help the students. Then the institution should supervise the teacher and make sure that teacher implemented a proper learning model in the classroom. Furthermore, the institution should supply the teacher with the program that increase teacher teaching skills especially the implementation of Independent Curriulum.

2. Other researchers

There were still many aspects which could be analyzed about the Independent Curriculum, which is this curriculum still new and many people needs the information. In this case this reasearch focused on the Learning Model, the researcher also hopes that the other researchers could conduct this research in a wider area. Therefore, the result will be more advantageous and can be applied in a large area.
