

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

After conducting the research, it could be drawn a conclusion which was intended to meet the objectives of the study. There are two objectives of the study, namely (1) find out what strategies are used by the English teacher in teaching writing descriptive text; (2) to discover the reasons why the English teacher uses the strategies. It can be concluded that:

1. Six out of seven strategies are found in this research. The teacher used six strategies written by Haynes and Zacarian (2010) in teaching writing descriptive text. They are determine key concept, make the lesson visual, link new information, provide comprehensible input, modify vocabulary, and cooperative learning. According to the research finding and discussion, the strategies made the students enjoy and interested in the learning. The strategies are used to achieve the learning objectives and make students understand the material.
2. There are three reasons why the students used the strategies, there were: (1) easy to understand by the students. The students understand the material because the teacher applied various strategies that help them learn new vocabulary and the concepts of the material. The teacher also always asked about things they didn't yet understand. (2) increase the students' attention. The teacher used the strategies that involved media, such as pictures. The teacher also linked the material with the students' personal information or

environment that made them interested in the learning. (3) improve the participation on the class. The teacher asked students to engage by answering the question given by the teacher. The strategy applied by the teacher made the teaching writing process more interesting and engaging.

5.2 Suggestion

Following the conclusions, suggestions related to this research are listed below:

1. For teachers

Teachers should prepare more media to support learning. Teachers also should develop a deeper understanding of the material with the proper use of the strategies. Suitable teacher strategies are extremely needed to achieve the learning objectives.

2. For students

From this research, students are expected to be more enthusiastic during the learning process. In addition, students are supposed to pay more attention during the learning process so students comprehend the material better.

3. For future researchers

The researcher hopes this research can help further researchers. Other researchers may conduct the same research but with different levels and materials. This research hopefully will be beneficial to others.
