Indry Santy Situmorang, 5203344005. Analisis Hasil Pemangkasan Rambut Segi Pada Siswa Kelas XI SMK Swasta PAB 12 Saentis. Skripsi. Fakultas Teknik. Universitas Negeri Medan, 2024

Dalam pemangkasan rambut, garis desain pola pemangkasan rambut sebagai patokan berbagai macam model pemangkasan rambut. Selanjutnya siswa kesulitan dalam menggunakan teknik yang benar dalam memegang gunting, serta siswa cenderung mengangkat rambut pada saat melakukan praktek pemangkasan rambut segi dan siswa kesulitan dalam menentukan keseimbangan potongan rambut pada saat melakukan praktek pemangkasan rambut segi. Penelitian ini bertujuan untuk mengetahui analisis hasil pemangkasan rambut segi pada siswa kelas XI SMK Swasta PAB 12 Saentis.

Metode penelitian ini menggunakan deskriptif. Populasi Penelitian adalah 30 siswa. Pengambilan sampel menggunakan teknik *simple random sampling*. Analisis data menggunakan teknik deskriptif, persyaratan analisis dengan menggunakan kesepakatan pengamat dan persentase. Instrument penelitian yang digunakan adalah lembar pengamatan hasil praktik pemangkasan rambut segi yang diamati 3 orang pengamat yaitu 1 orang pengamat dari ahli yang berkompeten dibidang pemangkasan rambut dan 2 orang pengamat dari guru tata kecantikan di SMK Swasta PAB 12 Saentis dengan skala penilaian menggunakan skala likert dengan skor 4,3,2,1. Data penelitian ini dikumpulkan dengan menggunakan lembar pengamatan hasil praktek pemangkasan rambut segi pada siswa SMK Swasta PAB 12 Saentis.

Berdasarkan penelitian yang dilakukan diketahui hasil rata-rata skor siswa sebesar 72 dengan skor tertinggi 80 dan skor terendah 66. Hasil rata-rata Ketepatan Hasil Pemangkasan Rambut dengan Desain Pola Pemangkasan dalam kategori baik sebesar 73%, rata-rata Keseimbangan hasil pemangkasan rambut segi dalam kategori baik sebesar 73%, rata-rata hasil pemangkasan rambut sesuai dengan teknik pemangkasan 0° dalam kategori baik sebesar 73%, rata-rata Hasil akhir pemangkasan rambut segi dalam kategori baik sebesar 93%, rata-rata Hasil penataan rambut dalam kategori baik sebesar 100%. Berdasarkan hasil penelitian dan pengolahan data secara keseluruhan diketahui bahwa, nilai hasil praktek pemangkasan rambut segi di SMK Swasta PAB 12 Saentis mendapatkan kategori Cukup baik dengan persentasi sebesar 40% (6 orang) lalu kategori baik sebesar 27% (4 orang) lalu kategori kurang baik sebesar 20% (3 orang) dan kategori sangat baik sebesar 13% (2 orang).

Kata kunci : Hasil Praktek, Pemangkasan, Rambut Segi

ABSTRACT

Indry Santy Situmorang, 5203344005. Analysis of the Results of Faceted Hair Trimming in Class XI Students of PAB 12 Saentis Private Vocational School. Skripsi. Thesis. Faculty of Techniques. Universitas Negeri Medan, 2024

In hair cutting, the hair-cutting pattern design line is a benchmark for various types of hair-cutting models. Furthermore, students have difficulty using the correct technique in holding scissors, students tend to lift their hair when practicing cutting faceted hair and students have difficulty in determining the balance of haircuts when practicing cutting faceted hair. This research aims to determine the analysis of the results of cutting faceted hair. For class XI students at PAB 12 Saentis Private Vocational School.

This research method uses descriptive. The research population was 30 students. Sampling used a simple random sampling technique. Data analysis uses descriptive techniques, analysis requirements use observer agreement and percentages. The research instrument used was an observation sheet on the results of the practice of cutting hair in facets which was observed by 3 observers, namely 1 observer from an expert who is competent in the field of hair cutting and 2 observers from a beauty teacher at the PAB 12 Saentis Private Vocational School with an assessment scale using a Likert scale with a score of 4,3,2,1. The data for this research were collected using an observation sheet on the results of the practice of cutting faceted hair on students at the PAB 12 Saentis Private Vocational School.

Based on the research carried out, it is known that the average student score is 72 with the highest score being 80 and the lowest score being 66. The average result of accuracy of hair trimming results with the trimming pattern design in the good category is 73%, the average balance of the hair trimming results in the inside good category of 73%, average hair trimming results according to the 0° trimming technique in the good category of 73%, average final result of faceted hair trimming in the good category of 93%, average hair styling results in the good category of 100%. Based on the results of research and overall data processing, it is known that the value of the practice of cutting faceted hair at the PAB 12 Saentis Private Vocational School was in the Fairly Good category with a percentage of 40% (6 people) then the good category was 27% (4 people) then the poor category by 20% (3 people) and the very good category by 13% (2 people).

Keyword : Practice Results, Faceted Hair Trimming.
