

## **CHAPTER V**

### **CONCLUSSION AND SUGGESTION**

#### **1.1 Conclusion**

YouTube is a popular video-sharing website where users can upload, watch, and share video clips for free. YouTube videos are primarily composed of music clips (video clips), movies, TV shows, and user-created videos. Because of the politeness in which comments are sent on *YouTube*, the readers are sometimes confused and disturbed. The level of politeness was critical in our communication.

Politeness can be seen not only in speech but also in attitudes and actions that have the power to influence someone else. Based on an analysis of netizen politeness, the researcher discovered four types of politeness: bald on record, positive politeness, negative politeness, and off record. The majority of these responses were well-written remarks. 2 Bald and on record, 34 positive politeness, 3 negative politeness, and 11 off the record. The three components of FTA have an impact on this: power, distance, and ranking.

#### **1.2 Suggestion**

The researcher wants to make the following suggestions based on the research findings:

##### **1. The Readers**

The researcher hopes that it will help readers, particularly English literature students, understand Brown and Levinson's concept of politeness strategies used in commenting on PewDiePie's YouTube channel.

##### **2 .FutureResearchers**

The researcher recommends that future researchers continue the research because it has a weakness, which is a lack of theory used to analyze research

problems because the researcher used only one theory by Brown and Levinson, and the results of analysis are also limited. It is suggested that future researchers, particularly those interested in the same topic, employ more than one theory to explain the results.
