

ABSTRAK

Gie Anggana Br Tarigan. 5213142004. “Hubungan Keaktifan Praktik Siswa dengan Hasil Praktik Cake dan Kue Indonesia di SMK Swasta Sinar Husni 1 BM Labuhan Deli. Pendidikan Tata Boga. Pendidikan Kesejahteraan Keluarga. Fakultas Teknik. Universitas Negeri Medan. 2026

Permasalahan dalam penelitian ini adalah belum diketahuinya secara jelas hubungan antara keaktifan praktik siswa dengan hasil praktik pada mata pelajaran Produk Cake dan Kue Indonesia. Penelitian ini bertujuan untuk: (1) mengetahui tingkat keaktifan praktik siswa, (2) mengetahui hasil praktik pembuatan kue Mata Roda, dan (3) menganalisis hubungan antara keaktifan praktik siswa dengan hasil praktik tersebut pada siswa kelas XI Tata Boga di SMK Swasta Sinar Husni 1 BM Labuhan Deli.

Penelitian dilaksanakan pada bulan Desember 2025 dengan metode deskriptif korelasional. Populasi penelitian adalah seluruh siswa kelas XI Tata Boga yang berjumlah 30 orang dan seluruhnya dijadikan sampel menggunakan teknik total sampling. Pengumpulan data dilakukan melalui angket untuk mengukur keaktifan praktik siswa dan lembar penilaian untuk menilai hasil praktik. Analisis data meliputi uji validitas dan reliabilitas angket, analisis deskriptif, uji normalitas, linieritas, serta uji hipotesis menggunakan korelasi product moment.

Hasil penelitian menunjukkan bahwa tingkat keaktifan praktik siswa berada pada kategori baik (43%), sedangkan hasil praktik cake dan kue Indonesia berada pada kategori baik (73%). Persamaan regresi yang diperoleh adalah $Y = 85,86 + 0,04X$. Hasil analisis korelasi menunjukkan r hitung sebesar 0,890 lebih besar dari r tabel 0,361 pada taraf signifikan 5%. Dengan demikian dapat disimpulkan bahwa terdapat hubungan yang signifikan antara keaktifan praktik siswa dengan hasil praktik Cake dan Kue Indonesia di SMK Swasta Sinar Husni 1 BM Labuhan Deli.

ABSTRACT

Gie Anggana Br Tarigan. 5213142004. "The Relationship Between Student Practical Activity and the Results of Indonesian Cake and Pastry Practices at SMK Sinar Husni 1 BM Labuhan Deli." Culinary Arts Education. Family Welfare Education. Faculty of Technique. Universitas Negeri Medan. 2026

The problem in this study is that the relationship between students' activeness in practical activities and their practical learning outcomes in the Indonesian Cake and Pastry Products subject has not been clearly identified. This study aims to: (1) determine the level of students' activeness in practical activities, (2) determine the students' practical learning outcomes in making Mata Roda cake, and (3) analyze the relationship between students' practical activeness and their practical learning outcomes among Grade XI Culinary students at SMK Swasta Sinar Husni 1 BM Labuhan Deli.

This study was conducted in December 2025 using a descriptive correlational method. The population of this study consisted of all Grade XI Culinary students totaling 30 students, and all of them were used as the sample through the total sampling technique. Data were collected using a questionnaire to measure students' practical activeness and an assessment sheet to evaluate the practical results. Data analysis included validity and reliability tests of the questionnaire, descriptive analysis, normality test, linearity test, and hypothesis testing using the product moment correlation.

The results showed that the level of students' practical activeness was in the good category (43%), while the practical learning outcomes in Indonesian cake and pastry products were also in the good category (73%). The regression equation obtained was $Y = 85.86 + 0.04X$. The correlation analysis showed that the calculated r value was 0.890, which is higher than the r table value of 0.361 at the 5% significance level. Therefore, it can be concluded that there is a significant relationship between students' practical activeness and their practical learning outcomes in Indonesian Cake and Pastry Products at SMK Swasta Sinar Husni 1 BM Labuhan Deli.
