

ACKNOWLEDGEMENT

Praise and thanks be to God Almighty for His blessings, grace, and love toward us all, which have enabled me to complete this thesis titled “Development of an E-Module Based on Problem-Based Learning (PBL) Model Using Canva on Chemical Bonding.” This thesis report was prepared to fulfill some of the requirements necessary to obtain a Bachelor of Education degree in the Chemistry Education Program, Faculty of Mathematics and Natural Sciences (FMIPA), State University of Medan (Unimed).

The author acknowledges that the completion of this thesis involved significant assistance from various parties, both directly and indirectly. Through this opportunity, the author would like to express his deepest gratitude to all those who have assisted in the preparation of this thesis. Special thanks are extended to:

1. Mrs. Nora Susanti, S.Si., M.Sc., Apt., my thesis advisor, who has provided extensive guidance, feedback, and direction from the initial planning stages through to the completion of this thesis.
2. Prof. Dr. Ramlan Silaban, M.S., Dr. Ayi Darmana, M.Si., and Ms. Susilawati Amdayani, S.Si., M.Pd., as thesis examiners, for their constructive feedback, suggestions, and critiques from the proposal seminar through the thesis defense, enabling this thesis to be successfully completed.
3. Mr. Freddy Tua Musa Panggabean, S.Pd., M.Pd., and Ms. Marnida Yusfiani, M.Pd., as expert validators, who evaluated and provided suggestions regarding the media, materials, and assessment instruments used in this research.
4. Prof. Dr. Ani Sutiani, M.Si, as the academic advisor who consistently provided guidance, motivation, and advice to the author.
5. All lecturers, staff, and employees of the Department of Chemistry, Faculty of Mathematics and Natural Sciences, University of North Sumatra, who have provided support and assistance throughout the author's academic journey.

6. Dad, Mom, my older brother, my two older sisters, and my beloved younger sister, Ayu, Bryan, Nibe, and Agung, even though we're not a family that's used to speaking from the heart, I know that behind that silence lie unceasing prayers and hopes for me. I understand and feel that the love and support you've given me all this time have taken different forms. Thank you for all the sacrifices, blessings, and happiness you have given.
7. The principal, administrative staff, and Mrs. Herlinawati Aritonang, S.Pd, M.Pd, as the chemistry teacher and the students of Class X-6 at SMA Negeri 2 Medan, who have greatly assisted the author in conducting this research.
8. My extended family, who have always prayed for and supported me while also imparting many personal lessons to me; thank you for every joy and sorrow we have weathered together until I completed this academic journey.
9. The author would like to express sincere gratitude to jojo, who has provided full support to the author, both in academic activities on campus and in running the small business initiated by the author. All forms of attention, assistance, and support given have been very meaningful and have greatly helped the author in completing this thesis. To my friend Mella Amilasti Naila, who have been with me since our freshman year thank you for being friends who listened to my complaints and provided so much help during my studies. May God reward your kindness.
10. Fellow CESP 22 classmates, thank you for the memories and the camaraderie we shared during our time at university. As for myself, I may not be good at expressing my feelings, but I've chosen to persevere, keep moving forward, and see through what I've started. Thank you for staying strong this far, fighting against the fears and doubts that often arise. A new chapter is about to begin; keep fighting, stay strong, and do your best in facing the challenges ahead, and when your dreams become a reality, learn to always remain humble. May the Lord Jesus Christ accompany every step and make everything easier.

11. Finally, the author would like to thank all parties who cannot be mentioned one by one. The author is aware that this thesis still has limitations, so constructive criticism and suggestions are greatly appreciated for the improvement of this thesis. May this thesis be of benefit to all concerned parties.
